

Affordable Energy Report Card

Evaluating the impact of energy policies on working New Jerseyans

Gas/Diesel Car Ban

Gov. Murphy's 80x50 Report calls for the banning the sale of gas/diesel cars in 2035.

The 80x50 Report goals are unattainable and unjust. Fewer than 20,000 electric vehicles have been sold in New Jersey in the last 10 years.

Feasibility

The plan calls for ~66,000 electric vehicles sales per year until 2025, a 600%+ increase over current sales.

Reliability

There are only 458 public charging stations in the state, with very few located in neighborhoods of color.

Cost

The median price of an electric vehicle in 2019 was \$56,600, 51% higher than the median price of a gas vehicle.
